T c. CATALYHIC ACTIVITY: ATP + L-ASPARTATE = ADP + 4-PHOSPHO-L-
ASPARTATE.

- CATALYHIC ACTIVITY: ATP + L-ASPARTOKINASE FAMILY.

- SPARTATE.

- SIMILARITY: BELONGS TO THE ASPARTOKINASE FAMILY.

                                                                                                                                                                                                                                                                               The sequence represents Mycobacterium fusion protein antigen TbF15 and F12 His tag for purification, antigens Ra3, 38kD, 38-1 and F1-Th44 (full-length TbH4). Compositions comprising at least 2 heterologous antigens, as a fusion protein, and vectors expressing the fusion proteins are used as vaccines to prophylactically immunise mammals especially humans) against infection by Mycobacteria. The compositions contain at least 2 heterologous antigens that increase the serological sensitivity of individuals infected with tuberculosis, a disease frequently affecting patients with acquired immunodeficiency disease,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This polypeptide comprises a fusion protein, designated TDF-2, composed of Mycobacterium tuberculosis antigens TDRa3 (see AAW64295), 38 kDa antigens (see AAW64322) and DDRP (see AAW64322). It was produced by PGC amplification (see AAV4450-57) of the appropriate antigen DNA sequences, cloning into an expression vector, and expression in E. coli. TDF-2 can be used for serodiagnosis of tuberculosis. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW64291-W64379) comprising antigenic or immunogenic portions of M. tuberculosis antigens, or fuelon proteins, DNA sequences encoding such polypeptides, recombinant expression vectors and host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MGHHHHHHVIDIIGISPISWEQAAAEAVQRARDSVDDIRVARVIEQDMAVDSAGKIIYRI

                                                                           ō
                                                                                                                                                                                                        This sequence represents a recombinant Mycobacterium tuberculosis tetra-antigen fusion protein, termed TDF-2, composed of the antigens TDR3, 39KD, TD38-1 and DPBP. The fusion protein is expressed in host cells using a vector carrying a polymucleotide (see AAZ20198) comprising the 4 coding sequences. The invention provides fusion proteins (see AAX2059-71) containing at least 2 M. tuberculosis antigens. The new fusion proteins and polymucleotides encoding them are useful as vaccines for preventing tuberculosis (claimed), for diagnosis (via in vitro assays or intradermal skin tests for detection of anti-M. tuberculosis antibodies), monitoring of detection of anti-M. tuberculosis antibodies), monitoring of effective immunogens than mixtures of the individual protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               KLEVSFKWRPAQPRCGSKPPSGSPETGAGAGTVATTPASSPVTLAETGSTLLYPLFNLWG

GS 4	aim 37; Page 271-273; 299pp; English. In the present invention describes polypeptides comprising an interest in well and tuberculosis antigen (Ag). Also describes and fusion protein containing M. tuberculosis tuberculosis Ag's, DNAs encoding them, derived fusion protein can be used in pharmaceutical vaccines to generate a protective or therapeutic immune tuberculosis and as reagents in skin tests for diagnosis tuberculosis. Ag can induce proliferation of, or cytckine sk'r, T, B or natural killer cells and/or macrophages in berculosis-immune subjects. AA219249 to AA219460 and AA931 (Y39225 are used in the exemplification of the present invequence 802 AA; Match 53.2%; Score 2700; DB 20; Length 80; Local Similarity 66.6%; Pred, No. 2, 9e-158;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  361 PIINYEYAIVNNRQKDAATAQTLQAFLHWAITDGNKASFLDQVHFQPLFPAVVKLSDALI 420
                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag) Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion tuberculosis-immune subjects, AAX19299 to AAX19460 and AAX39083 to AAX39225 are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The novel polypeptides are useful for detecting M. tuberculosis infection in biological sample by detecting antibodies which bind with the bolypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.

The invention relates to a purified polypeptide which induces an immune response of Mycobacterium tuberculosis. Polypeptides of the invention are useful for diagnosing, treating or preventing M. tuberculosis infection, particularly tuberculosis infection. In particular, the polypeptides are useful as a vaccine formulation with an adjuvant to afford long-term protection in animals against the development of tuberculosis. The protein coding sequence may be used to encode a protein product for use as an immunogen to induce and/or enhance an immune response to M. tuberculosis. This sequence represents an M. tuberculosis fusion protein of the invention.

Note: The specification states that this polypeptide is encoded by the polynucleotide shown in ABK14132.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

The sequence was deduced from a composite sequence (see AAV44440) of overlapping DNA clones TbH4 and XPI. TbH4 (see also AAW64319) was isolated from a M. tuberculosis strain H37Rv expression library and XPI from a M. tuberculosis Exchan expression library. Recombinant XPI protein was prepared. It stimulates cell proliferation and interferongamma production in T cells isolated from M. tuberculosis-immune donors. The invention relates to methods for diagnosing tuberculosis. It provides polypeptides (see AAW64291-W64379)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated Mycobacterium tuberculosis polypeptides and DNA - user to develop products for the detection of M. tuberculosis infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tuberculosis; infection; diagnosis; antigen; TbH-4; XP1

comprising antigenic or immunogenic portions of M. tuberculosis antigens, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonucleotide probes and primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tuberculosis, M. tuberculosis, antigen, immunogen, diagnosis, immunisation; vaccine, infection;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  421
                                                                                                                                                                                      The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion tuberculosis-immune subjects. AZ19249 to AAZ19460 and AAX3983 to AAX39225 are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            301

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61
                                                                                                                                                                                                                                                                                         This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     113
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GDTFLFTQYLSKQDPEGWGKSPGFGTTVDFPAVPGALGENGNGGMVTGCAETPGCVAYIG 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes polypeptides comprising an immunogenic are vaccines and fusion tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's, DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions of vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T. B or natural killer cells and/or marcophages in tuberculosis-immune subjects. AZI9249 to AAZI9460 and AAXI99083 to AAXI93225 are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  53

                                                                                                                                                                                                                                                                                                              nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in blological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
